

Elevate Your Genomics Research: Shasta™ Single Cell Technologies and NGS Innovations

Dive into the cutting-edge world of genomics with Takara Bio. This seminar will introduce you to our new nanowell-based Shasta™ technologies for high-throughput single-cell total RNA- and single-cell DNA-Seq, enabling detection of splicing isoforms, gene fusions, and CNVs (including chromosome arm-level CNVs) in a higher number of single cells than ever before. Additionally, explore our diverse solutions for plate-based Next-Generation Sequencing (NGS), including options for analysis of mRNA, Total RNA, smRNA and DNA in single cells and bulk samples.
